Table of Contents

- [Record High Percent](#)

Overview

Record High Percent equals new 52-week highs divided by the sum of new 52-week highs plus new 52-week lows. This breadth indicator shows when new highs outnumber new lows and when new highs are expanding. New highs outnumber new lows when the indicator is above 50. New highs are expanding when the indicator is above 50 and rising.

Details

Symbol Group: Record High Percent

Publisher: StockCharts

Update Frequency: End-of-day (EOD).

These indicators are updated after the market close, usually by 6:00 PM ET.

Data Characteristics

StockCharts uses a three-step process to calculate breadth indicators. First, StockCharts maintains component lists for these indices. Second, our scan-engine uses these component lists to run scans based on the price data for the individual stocks. Third, the data is then updated and published to our website.

This “in-house” data may differ from other sources due to differences in the index components and price data. Index components change and require updates on a regular basis. Also note that StockCharts uses dividend-adjusted data for its calculations, while other sources may use non-adjusted data.

Chart Example

The chart example below shows Nasdaq 100 Record High Percent (\$RHNDX) as the gray line, a 20-day moving average as the red line and the Nasdaq 100 below. Chartists should consider using a moving average to smooth the data because Record High Percent can be a volatile series. The Nasdaq 100 was added because it is handy to plot the underlying index along with the indicator.

Symbol Sample

[Click here for a current list](#) and to see the starting dates for these symbols. The example above shows a sample list of symbols. Note that the starting dates are shown in the symbol catalog under the “first data point” column.

Symbol	Name
\$RHCOMPQ	Nasdaq Record High Percent Index (EOD)
