## BPI Symbols

---

### Overview

---

StocksCharts maintains and publishes the Bullish Percent Index for over a dozen indices and sectors. The Bullish Percent Index, or BPI, is a breadth indicator that shows the percentage of stocks on [Point & Figure Buy Signals](#). There is no ambiguity on P&F charts because a stock is either on a P&F Buy Signal or P&F Sell Signal. The Bullish Percent Index fluctuates between 0% and 100%. In its most basic form, the Bullish Percent Index favors the bulls when above 50% and the bears when below 50%. BPI is also considered overbought when above 70% and oversold when below 30%.

### Details

---

**Symbol Group:** Bullish Percent Indices

**Publisher:** StockCharts

**Update Frequency:** End of Day (EOD).  
These indicators are updated after  
the market close, usually by 6:00 PM ET.

### Data Characteristics

---

StockCharts uses a three-step process to calculate the BPI indicators. First, StockCharts maintains component lists for these indices. Second, our scan-engine uses these component lists to run scans based on the price data for the individual stocks. Third, the data is then updated and published to our website.

This “in-house” data may differ from other sources due to differences in the index components and price data. Index components change and require updates on a regular basis. Also note that StockCharts uses dividend-adjusted data for its calculations, while other sources may use non-adjusted data.
