CBOE Indices

Overview

The CBOE produces a variety of indices related to options and other securities. The “Buywrite” indices show performance as if an investor owned the stocks in the index and wrote covered calls to generate income. Indices based on the put/call ratio can be used to gauge market sentiment among option traders. The volatility indices, which are based on option premiums, can be used to measure fear and complacency within a particular market.

Details

Symbol Group: CBOE

Publisher: Chicago Board Options Exchange

Update Frequency: End-of-day (EOD).
These indicators are updated after
the market close, usually by 6PM ET.
