- [Intellidex Indices](#)

Overview

Intellidex indices use a quantitative model to identify stocks with the most potential for capital appreciation. This model is based on price momentum, earnings momentum, earnings quality, management action, and valuation. Some of the individual indicators include: price relative to the 52-week high, earnings revisions, free cash flow margin, share buybacks and book value. Components are evaluated quarterly and these indices are regularly rebalanced. Intellidex indices cover the broad market, sectors, industry groups and investment styles.
