MSCI Indices

Overview

MSCI, which is a product of Morgan Stanley (MS) and Capital International (CI), provides indices that focus on emerging market countries, developed market countries and various stock groups. For example, the MSCI EAFE Index is a benchmark designed to measure the performance of international stocks in developed markets outside the US. These indices are also used as the benchmarks for many ETFs and mutual funds.

The MSCI index symbols have the word "msci" in their name. As such, users can also find these indices by searching for "MSCI" in the symbol catalog (without quotations). All index symbols start with a Dollar sign (\$), are shown first in the table and have INDX in the "Exch" column. The non-index symbols are shown below the index symbols. These represent stocks, ETFs, ETNs and mutual funds.
